## **Parents Monitor Their Children on Their Routes to and From School with a Simple Mobile Tracking System**

Parents rest assured their child is in route to and from their destination with a user-friendly mobile application, *Child Safe*—designed to track the location of your child’s bus, communicating directly between mobile phones, tablets, and computers.

DENVER, January 29, 2019, [5280—The Denver Magazine] — 2019 UCD Digital Design Team announced launching the new Android app, Arrival Verification Assurance (AVA); giving parents relief their child is arriving to and from their daily transportations and destinations on time and safely.

The problem starts with parents feeling unsure of where the location of their child is. *Child Safe* provides an advanced mobile tracking system that ties in directly and communicates through a child’s wristband to receive location through a mobile phone, tablet, or computer by sending alerts to parents. The wristbands are designed for kindergarten-middle school students to ensure safety and location of the child when arriving and departing from school. The wristband show when buses arrive late, but also shows if your child safely got off the bus at school. The application will solve the problem by alerting parents where a child has arrived at school or any other location through their wristband.

*Product Designer, Emily Weincek stated, “The goal of this application is to reassure parents their child tracking band activates when the child enters and leaves the bus, parents often ask at some point when their child is on their way to or from school, “where’s is my child?”*

*“As a parent I always worry about my kids’ whereabouts, but with Child Safe I’m reassured that my child is safe, they got off the bus both, arriving and departing from school. I like how I get alerts sent to my phone like if the bus is running late to my kids stop,” said, Elizabeth Smith, Mother.*

Register online and create an account for all your children. Each child registered will receive a wristband, sent to your home. Once the registration is completed parents will receive a confirmation text. Once the wristband is set up, following the instructions included, parents can download the application and log in with the email and password you've created. The wristbands come with a code. Enter the code after logging in to be able to track the child's route to and from the desired destination. The application will mainly serve as an informational tool, to insure nothing could be changed through the app in case the phone was lost or stolen.

*Child Safe* mobile tracking system will verify location and times daily to insure you, your child is safe. Eyes on the sky caring and looking after your children, always making sure they arrive on time.

Begin by visiting [www.trackingwithchildsafes.org](http://www.trackingwithchildsafes.org) and download the application in the App Store and Google Play Store.
